Electro-Pneumatic Retarder Control

The Gripper
Air Control System

Precision Rail and Manufacturing is pleased to present our new air control valve system The Gripper.

Designed to be super-responsive, maintainer friendly and able to operate in extreme weather conditions, The Gripper will improve yard throughput and system efficiencies. Please contact your Precision Rail and Mfg. sales representative for more details.
Features:

- More precise car control
- Master/slave configurable
- Simple, reliable and maintainer friendly
- 100% compatible with all yard control systems
- Heat shield/vents for high temperature operations
- Standard AAR terminal wire connections

Available Options:

- Integrated lockout-tag-out safety system
- Cold weather package for extreme weather conditions
- Standard 24 volt or optional 12 volt signal capability
- Lightening arrestor package
- Secondary pressure transducer

Customer Testimonials:

“It cut our maintenance time from hours to minutes!”

“The unit operated flawlessly at -23°F!”

“Our over-speeds have been greatly reduced!”
